

# NEW YORK STATE TRAFFIC ROUTING GUIDE

KU2N  
NE2W

## About this directory

This index was painstakingly transferred to electronic form by Ed Krymowski, NE2W. Ed has also written a BASIC program for the C64 which accesses this database and quickly gives routing information for a selected destination. In the summer of 1987, the files which comprise this listing were transmitted via packet autoforwarding channels to the KA2BHB PBBS. From here they were downloaded by KU2N to a PC, and continued on a tortuous trek through several computer systems and software packages too numerous (and expensive) to mention. In the process, the serial ZIP code index was generated, VHF net coverage data was combined, and the general interest front matter was added.

With all this high-powered computer manipulation, we are confident that the digital devices did not introduce any errors. We are equally certain that the digital appendages did. In addition to typographical aberrations, you will find that many of the localities listed simply do not exist. The original list was compiled for the NY State Department of Taxation using, we presume, postal sources. Some of the names listed are not towns, but rather names for postal substations and districts which are covered under other township names. It is improbable that any legitimate address which one might encounter in a radiogram will not appear on one of the lists.

Despite these shortcomings, we know of no other directory of this kind available to NY amateurs. When combined with current net rosters, we think the end result is a useful tool for NTS traffic handlers, particularly current and potential Net Control Stations. Please address your comments, additions, and corrections to KU2N @ WB2WXQ.

Happy routing.
